

S.36.04 — IGT — Insurance and Reinsurance

General comments:

This section relates to annual submission of information for individual entities. This template shall report all (significant, very significant and transactions required to be reported in all circumstances) intra-group transactions between entities in scope of the group supervision related to internal insurance and reinsurance within the group.

These include, but not limited to:

- Insurance contracts of entities within the scope of the group with insurance companies within the scope of the group
- reinsurance treaties between related undertakings of a group;
- facultative reinsurance between related undertakings of a group; and
- any other transaction that results in transferring underwriting risk (insurance risk) between related undertakings of a group.

This template shall include intragroup transactions that were:

- in-force at the start of the reporting period.
- incepted during the reporting period and outstanding at the reporting date.
- incepted and expired/matured during the reporting period.

Where two or more transactions between entities of the group which, from an economic perspective, contribute to the same risk, or, serve the same purpose / objective or are temporally connected in a plan, they shall be considered as a single economic operation.

As such each transaction which is part of a single economic operation shall be reported whenever collectively they are at or above the corresponding threshold for significant intra-group transactions, even though individually the transactions fall below the threshold.

Any element added to significant intragroup transactions shall be reported as a separate intragroup transaction, even if the element in its own right falls below the significant threshold limit. For example, if an undertaking increases the initial loan amount to another related undertaking the addition to the loan shall be recorded as a separate item with its issue date as the date of the addition.

Where the transaction value is different for two transacting parties (e.g. a €10m transaction between A and B where A records €10m but B only receive €9.5m because of transactions costs, of say €0.5m has been expensed) the template shall record the maximum amount as the transaction amount, in this case €10m.

Indirect transactions shall be defined as any transaction shifting risk exposures between entities within the group including but not limited to transactions with special purpose vehicle, collective investment undertakings, ancillary entities or unregulated entities; or entities outside of the group but ultimately risk exposure is brought back or stays within the group. Where there is a chain of related intragroup transactions (e.g. A invests in B and B invests in C), this transaction shall be reported as an indirect transaction. Therefore A to C transaction shall be reported and the comments shall mention the intermediary step. In the case of a waterfall of transactions, e. g. if “A”-> “B” -> “C”-> “D” where both “B” and “C” are both in the group but unregulated entities, this transaction shall also be reported.
